Objective and Investment Policy

The objective of this Sub-Fund is to track the performance of MSCI Europe Index (the "Index"), and to minimize the tracking error between the net asset value of the Sub-Fund and the performance of the Index.

The Sub-Fund aims to achieve a level of tracking error of the Sub-Fund and its index that will not normally exceed 1%.

Risk Indicator (Source : Fund Admin)

Lower Risk

Higher Risk

The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 5 years. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

* Source : Amundi. The above cover complete periods of 12 months for each calendar year. Past performance is no predictor of current and future results and does not guarantee future yield. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

Management commentary

In November, the global picture remains mixed: in the United States, productive investment continues to support growth while consumption shows signs of slowing; Europe displays modest growth with inflation close to target; China is still battling deflationary pressures while India is accelerating strongly. On the markets, the overall situation is relatively calm: equities are generally stable, interest rates are falling in the United States, the dollar is moderately down, gold is rising, and oil is declining, partly driven by signs of geopolitical easing.

Global equities appeared to be little changed in November (MSCI ACWI –0.1%), but behind this aggregate lie significant sectoral and regional movements. There was a rotation towards quality and defensive sectors after profit-taking on certain technology stocks and AI themes: “long” growth stocks, which are highly dependent on expectations of distant profits, suffered more than stocks with more stable cash flows. Geographically, Europe continued its strong performance for the year, supported by cyclical and banking sectors in the Eurozone.

In terms of valuation, markets remain demanding for technology leaders, making earnings surprises or profit revisions particularly influential in the short term.

The MSCI Europe index was rebalanced on 11/24. Eight companies were added for a total of 0.43% and six were removed (0.34%).
