This document provides you with key investor information about this Sub-Fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this Sub-Fund. You are advised to read it so you can make an informed decision about whether to invest.

AMUNDI FUNDS LATIN AMERICA EQUITY - R USD A Sub-Fund of the SICAV AMUNDI FUNDS ISIN codes: (A) LU0823047039, (D) LU0823047112

This UCITS has appointed Amundi Luxembourg SA, an entity part of Amundi group, as its Management Company

Objectives and Investment Policy

To achieve long-term capital growth. Specifically, the Sub-Fund seeks to outperform (after applicable fees) the MSCI EM Latin America index over the recommended holding period.

The Sub-Fund invests at least 67% of assets in equities and equity-linked instruments of companies that are headquartered, or do substantial business, in Latin America. Specifically, the equity exposure of the Sub-Fund usually ranges between 90% and 100% of its total assets.

The Sub-Fund may use derivatives for hedging and efficient portfolio management.

The Sub-Fund provides an active management to seek to outperform (after applicable fees) the MSCI EM Latin America index, which represents the reference indicator of the Sub-Fund.

The Sub-Fund does however not aim to replicate the reference indicator and may therefore significantly deviate from it.

The investment team actively manages the Sub-Fund's portfolio by combining top-down and bottom-up strategies: geographical allocation, sector allocation within each country and equity selection based on growth potential and valuation. Economic, political and valuations analysis are carried-out in order to decide country and sector allocation. Analysis and valuation models had elaborated to assess upside potential and risks of each investment case in order to choose the stocks which are selected in the portfolio. For the construction of the portfolio, sizable deviations versus the benchmark which serves as reference are usually taken. Amplitude of deviations vary depending on the degree of conviction of the investment manager, insofar where it may invest in equities or countries not represented in the reference indicator.

Even if the Sub-Fund seeks to outperform the reference indicator in adopting an active and discretionary management process, it may, at certain points in time, achieve a return and/or expose to a portfolio close and very similar to that reference indicator due to a variety of circumstances that may among other include a narrow investment universe which offers more limited opportunities in terms of investments compared to those represented in that reference indicator, the chosen degree of risk exposure depending on market circumstances or environment, a wide spread portfolio investing in a large number of securities or the current liquidity conditions.

The accumulation share automatically retains, and re-invests, net investment incomes within the Sub-Fund when the distribution share pays dividends in September of each year.

The minimum recommended holding term is 5 years.

Shares may be sold or redeemed (and/or converted) on any dealing day (except otherwise stated in the prospectus) at the respective dealing price (net asset value) in accordance with the articles of incorporation. Further details are provided in the prospectus of the UCITS.

Risk and Reward Profile

The risk level of this Sub-Fund mainly reflects the market risk arising from investments in emerging markets equities.

Historical data may not be a reliable indication for the future.

Risk category shown is not guaranteed and may shift over time.

The lowest category does not mean 'risk free'.

Your initial investment does not benefit from any guarantee or protection.

Important risks materially relevant to the Sub-Fund which are not adequately captured by the indicator:

- Liquidity risk: in case of low trading volume on financial markets, any buy or sell trade on these markets may lead to important market variations/fluctuations that may impact your portfolio valuation.
- Counterparty risk: represents the risk of default of a market participant to fulfil its contractual obligations vis-à-vis your portfolio.

The occurrence of any of these risks may have an impact on the net asset value of your portfolio.
