## >> Risk and Reward Profile

### What does this risk indicator mean?

The above risk indicator ranks potential risk and reward and is based on medium-term volatility (how sharply the Sub-Fund's actual or estimated share price has gone up and down over five years). Historical data, such as that used in calculating this synthetic indicator, may not be a reliable indication of the future risk profile of the Sub-Fund. The lowest category does not mean a 'risk-free' investment. The Sub-Fund's risk indicator is not guaranteed and may change over time.

The Sub-Fund's risk category reflects the risk profile of the mix of asset classes in which it invests.

For un-hedged currency classes, exchange rate movements may affect the risk indicator where the currency of the underlying investments differs from the currency of the share class.

## Terms to Understand

**Bonds Securities** that represent an obligation to repay a debt, with interest.

**Commodities** A category that includes metals, building materials, fuels, and food ingredients.

**Derivatives** Financial instruments whose value is linked to one or more rates, indices, share prices or other values.

**Equities** Securities that represent partial ownership of a company.

## Additional key risks

The risk indicator reflects market conditions of recent years and may not adequately capture the following additional key risks of the Sub-Fund:

**Counterparty risk** Contract parties may default on their obligations under derivatives contracts entered into with the Sub-Fund.

**Operational risk** Losses may occur due to human error or omission, process errors, system disruptions or external events. The Sub-Fund invests in other funds and may be indirectly exposed to a default by the depositary of an underlying fund.

**Derivatives risk** Derivatives create leverage in the Sub-Fund and may cause movements in the value of the underlying investments to amplify gains or losses to the Sub-Fund.
